Puretough™ P series mixes safety with user friendly features

Hand & Arm Protection specialist Marigold Industrial® has unveiled a brand new range of gloves – the Puretough™ P Series – providing wearers with a wide range of benefits and perfect for a diverse number of industry sectors where grip and flexibility are particularly important.

A knitted 3 glove range, made at their high-tech plant in Portugal - the P1100, P3000 and P5000 – form the new Puretough™ P Series combining comfort, flexibility and grip, in addition to offering mechanical protection, in particular cut level 5 for P5000, and cut level 3 from the P3000.

Perfectly suited for the general handling requirements in the engineering, electronics and automotive industries, the Puretough™ P Series is also lint free and has a mixed synthetic palm coating, making them ideal for quality control tasks or environments where the surfaces of objects need to remain clear of any marks or flaws.

Non-solvent and water-based in addition to being Formaldehyde, Silicone, Phthalate (plasticizer), Azo Dye and DMF free, the Puretough™ P Series is breaking new ground in the glove market from an environmental and user safety perspective, being safer for the user and the environment.

As part of the launch of the Puretough™ P Series, Marigold Industrial® is undertaking a major glove sample mailing campaign to enable health and safety managers to see them for themselves, and would like to hear from any company interested in receiving the mailing.
