Marigold Industrial[®] expands its Puretough™ P Series and goes 3DO at Safety & Health Expo

For those workers who really have to get to grips with the materials they are handling, hand protection specialist Marigold[®] Industrial will be unveiling its brand new Puretough™ P3000 3DO glove at the Safety & Health Expo.

A sister glove to the level 3 cut resistant P3000 glove, which forms part of the Puretough™ P Series, the new P3000 3DO has been designed specifically for those people involved in high level detail work who need to combine this with wider hand protection and cut resistance.

With 3 open fingers (Digits Open) – the middle finger, forefinger and thumb the new P3000 3DO enables the wearer to handle even the smallest components – making it ideal for those working in the manufacturing sector, on assembly lines, finishing areas and some areas of the construction, maintenance and facilities management.

Manufactured using Techcor[®] knitting technology, in addition to the 3 open fingers, the P3000 3DO has been designed to provide a range of wider wearer benefits including high levels of comfort, dexterity in addition to level 3 cut protection as certified under the EN388 Mechanical Hazard standard. It also has level 5 dexterity.

Lint-free, non-solvent and water-based in addition to being Formaldehyde, Silicone, Phthalate (plasticizer), Azo Dye and DMF free, the Puretough™ P 3000 3DO is part of Marigold Industrial's ground breaking focus on environmental manufacturing and wearer well being.
