

Love your hands, we do™

October 2007

Texblade TB15 at the cutting edge.

Hand protection expert Marigold Industrial has enhanced its cut resistant range of gloves with the launch of Texblade TB15.

The knitted cut resistant Texblade TB15, is manufactured using the high performance Techcor® knitting technology, to provide the perfect combination of cut resistance, comfort and dexterity.

Ideally suited for those people working in areas that have cut hazards such as the automotive and engineering sectors, the medium weight 10 gauge seamless knitted glove is ambidextrous and is manufactured with elasticated wrist for a snug fit.

Techcor® knitting technology has been manufactured exclusively for Marigold Industrial which is part of the

Comasec International Group. In addition to its cut resistance and comfort, Texblade TB15 also has low adherence of dirt particles thanks to its network of mottled threads.

"Texblade TB15 utilises the latest knitted cut resistant fibre, manufactured exclusively for us, with the added benefit of providing the wearer with high levels of comfort and dexterity, making a perfect addition to our already wide range of knitted, cut resistant gloves and sleeves," said Donald Gillespie, International Marketing Manager, Comasec International Group.
