

# Marigold Industrial<sup>®</sup> equips team with enhanced glove assessment kit.

To ensure every member of its team has the very latest equipment on which to conduct site visits and glove suitability assessments, hand protection expert Marigold Industrial has created a dedicated glove assessment kit.

The new kit has been produced to enable every member of the Marigold Industrial team to be able to test, measure and recommend a glove best suited to the tasks being carried out on site, or where the company has been brought in to review existing hand protection issues, assess the suitability of the gloves currently being used on site and where necessary recommend improvements.

Including a dexterity pack, set of electronic scales, electronic calibrator, laser thermometer and ruler, the glove assessment kit is also backed up with the company's very latest Chemical Permeation Chart, which has just been launched, its full glove guide and samples of its latest glove ranges.

## Features of the new kit include:

**Dexterity Kit** – Containing small screws, bolts and pins to enable tests to be carried out on the dexterity performance of a glove or the dexterity comparisons between a range of gloves. The inclusion of two

pins within the kit follows in-company research and is designed to complement the existing EN420 standard, effectively creating two new levels of dexterity - 6 and 7.

**Electronic Scale** – to enable gloves to be weighed as part of assessment

**Electronic Calibrator** – to enable glove thicknesses to be measured, e.g. palm, cuff or fingers

**Laser Thermometer** – to measure workplace temperatures, enabling an assessment of the thermal requirements of gloves being used/considered

**Chemical Permeation Chart** – chart assessing the permeation performance of Marigold Industrial's existing chemical resistant range against 100 common workplace chemicals

"We have designed the glove assessment kits to enhance the service we can provide to end users when

conducting on site assessments. We are increasingly called out to assess an organisation's existing glove usage and recommend where improvements can be made and the glove tool kits will enable us to undertake these tasks even more effectively," said Marigold Industrial's UK Country Manager John Thorne.
