Comabox® handing major benefits to businesses

Increasing numbers of firms across the UK are giving the Comabox® - a unique hand protection stock management system by Comasec International Group (CMIG) – the thumbs up and integrating it into their PPE programmes.

Able to be placed directly into industrial plants, the hi-tech hand protection vending machine enables CMIG's products – which include the Marigold Industrial and Comasec brands - to be self contained and stocked with products relevant to a business's specific needs.

Software within the Comabox® enables businesses to more effectively manage hand protection stock levels in addition to providing detailed information on employee glove user levels.

Designed with a magnetic swipe card reader, the Comabox® gives staff access to gloves 24 hours a day, 7 days a week, by simply swiping their card through the machine, picking the gloves needed and then returning to work.

By recording details of every card swipe, the Comabox® also provides health and safety managers with data to analyse how many and what types of gloves are being used by staff – whether collectively or individually - providing up to the minute inventory data. It also helps to ensure employees have been issued the correct gloves.

According to Marigold Industrial UK country manager John Williams, businesses say the Comabox® is bringing a range of benefits to their PPE programmes.

"The Comabox® really is a unique system that brings a number of measurable benefits to the workplace hand protection programme, not only ensuring that stock levels are managed and staff have access to the right gloves for the job but crucially providing health and safety managers with regular information on every aspect of staff glove usage, which they are finding extremely useful," said John.

"More businesses than ever before are now turning to the Comabox® system, given the wide range of benefits it provides – not least of which is ensuring that staff have access to the right hand protection within the workplace whenever they need it," he added.
