## Enhanced Emperor Range offers heavy duty chemical protection

Marigold Industrial® has enhanced its renowned, high performance range of Emperor heavy-duty chemical protective gloves, providing workers with protection against workplace acids and alkalis.

The highly regarded range of protective gloves have been enhanced with the arrival of Emperor REINF with a reinforced crumb covering all of the hand. It's available in three lengths – 17"/432mm (mediumweight), 24"/610mm & 26"/661mm (both heavyweight) – designed to provide high level protection against those working with hazardous water-based acids and alkalis in tough industrial environments.

Ideal for those in chemical manufacture and all forms of shot blasting, the unlined, black, natural latex glove is available in three different lengths to suit various protection needs.

With an EN rating of 4241, not only do the new gloves provide excellent chemical resistance but high-level tear and abrasion resistance.

The exterior of the glove is chlorinated to cleanse the surface, with the addition of a granular latex crumb finish on the hand area which increases durability, prolonging the product life. The Emperor range has also been designed with a beaded cuff which not only improves tear resistance but makes them easier to pull on.

"There are certain situations where there simply cannot be any risk of skin exposure to chemicals and protection needs to be the number one priority which is what the Emperor range is designed to provide. The new Reinforced versions further enhance what is already a very well regarded range and are especially suited to those working in shot blasting," said John Thorne, UK Country Manager of Marigold Industrial Ltd.
