## Marigold Industrial® launches new food flyer

Hand & Arm Protection expert Marigold Industrial Ltd has launched a brand new food flyer to help safeguard workers against the wide range of hand hazards that are specific to the industry.

As well as providing information and explanation on key issues such as the food contact legislation, the new food flyer lists all gloves within Marigold Industrial's food range, categorising by applications and colour coded to aid product selection, ensuring that companies can choose the best glove for the job, not only from a food contact but worker safety perspective.

The guide includes the very latest additions to Marigold Industrial's glove range including the N1000 Series, part of the expanded Nitrotough™ range – which is food compliant (not involving fatty or acidic foods). The new Nitrotough™ N1000 Series has also achieved the Oeko-Tex 100 classification guaranteeing

that the textiles used in the manufacture of the new gloves are carcinogen free are tested against pesticides and phenol chlorine, containing no heavy metals, have little or no formaldehyde, have a neutral pH and are accelerator free with no added biocides.

The P56B Insulator™ also joins the new guide for those requiring thermal protection and good grip.

"The new food flyer provides health and safety and quality assurance managers with an instant and invaluable resource specific for the food industry and the hazards involved, whether cut, chemical, thermal or indeed where food handling and product protection is paramount," said Marigold Industrial Marketing Manager Donald Gillespie.

In addition to product and legislative information, the food flyer also offers essential advice on the 'dos and don'ts' for keeping food industry hands healthy.
