Grasp Food - a new hand protection report tailor made for the food industry

The Food sector is one of the most hazardous sectors in which to work made up of over 30 industries ranging from slaughterhouses and sugar refineries to malt manufacture and whisky distilling.

With an estimated 25% of all manufacturing injuries taking place in the food Industry according to the HSE and on the back of the success of their Grasp magazine, covering industries in general, Marigold® Industrial has developed a version for the food industry titled 'Grasp Food.'

The new report – which provides information on the wide range of hazards in the food industry and how to protect the hands and arms of workers against them, is available as an e-magazine from the Marigold® Industrial website or by emailing ukenquiries@marigold-industrial.com

Covering areas from chemical and mechanical hazards, through to preventing cross contamination and the dangers of dermatitis, the new Grasp Food Report is designed to reinforce the message of the importance of hand and arm protection in an industry that is still very much reliant on the hands of its workforce.

"The food industry remains one of the most hazardous sectors to work in across the UK, largely due to the fact that there are so many diverse hand hazards that workers encounter on a daily basis.

"The original Grasp report, was a major success and we felt the time was right to develop a version containing hand protection information that is tailored for the food industry, this time as an 8 page e-magazine. It will hopefully provide health and safety managers with everything they need to help reduce the risk of hand and arm injuries within the food industry," said Marigold Industrial International Marketing Manager Donald Gillespie.
