## XRT™ RANGE IS EXTENDED TO KEEP WORKING HANDS SAFE AND WARM

Hand protection specialist Marigold® Industrial has extended its highly successful XRT™ range with the launch of two new products.

The highly acclaimed XRT™ mechanical glove range has now been bolstered by the launch of XRT™ MechaniX AV glove and XRT™ Insulator.

For those working with plant and equipment that have vibration risks, Marigold® Industrial has designed XRT™ MechaniX AV to help reduce the impact that these high impact vibrations can have.

Manufactured using a synthetic leather with a specialist reinforcement fabric on the fingers, the MechaniX AV also benefits from an ergonomically designed palm insert that absorbs and dampens shocks and vibrations to the hands. Tests on the new glove undertaken using the EN10819 test method revealed that in the Medium Frequency range there was a noticeable dampening of vibrating transmissions when XRT™ MechaniX AV was used.

Physically, MechaniX AV provides the wearer with good resistance against abrasion, tear and puncture hazards with an EN388 rating of 2122, high flexibility and comfort levels and a snug fit thanks to the elasticated and Velcro wristband.

Joining XRT™ MechaniX AV is the new XRT™ Insulator, designed specifically to keep the hands of workers warm and protected when undertaking tasks at temperatures as low as -30° C.

Love your hands, we do™

Finished in hi-visibility blaze orange, XRT Insulator™ incorporates synthetic leather on the palm, thumb and fingertips, and Lycra synthetic fibres on the back of the hand, and an elasticated wrist to keep the glove fitted.

Ideal for use in cold stores, construction and general outdoor work XRT™ Insulator combines high comfort and flexibility with general protection, excellent abrasion resistance, good grip and good looks and are a perfect alternative to traditional leather gloves.
