NITROTOUGH™ RANGE BENEFITS FROM NEW ADDITIONS

Marigold® Industrial has expanded its highly successful Nitrotough™ range with the launch of the N1500 PF and N3500 – extending the levels of protection and comfort available from the range.

Able to be used for a wide array of applications, from the food industry to construction and outdoor work, the new Nitrotough™ N1500 PF gloves offer the wearer a range of benefits that include comfort, dexterity, grip and abrasion resistance.

Food contact compliant, N1500 PF has enhanced grip as a result of the rough nitrile palm fit coating and offers great flexibility and comfort. The fit is also enhanced as a result of the latex knit wrist.

In addition to the food industry the glove is also ideally suited for those working in more challenging environments such as construction and general engineering. For those specifically working outdoors, the company has also developed two fluorescent gloves -Nitrotough™ N1500 Orange and Yellow Viz PF.

Benefiting from the same abrasion resistant rough nitrile palm fit coating, comfort and dexterity, Nitrotough™ N1500 Viz PF is manufactured using fluorescent yellow or blaze orange 13 gauge nylon liner, making it particularly suited to the construction sector or those in outdoor engineering environments.

Joining the above is the new Nitrotough N3500 range – nitrile coated gloves available in 4 versions – dipped, longer cuff, palm fit and safety cuff – offering the wearer a combination of excellent abrasion performance, good cut protection and very good grip performance due to the micro nitrile finishing of the coating which is also resistant to residual oils and greases.

Love your hands, we do™

The performance qualities of Nitrotough™ N3500 gloves make them ideal for those people undertaking fine tactile handling in industries such as fitting and assembly works, quality control, automotive and glass industries.
